

THE COMPUTER WORKSHOP GROUP NEWSLETTER

November 2022

WHAT A MONTH

Chris Bugeja
Owner / Director

It is hard to believe that we are in November already as the past few months have been an absolute whirlwind.

With the renovations of our Cloncurry shop almost complete, and with even more Starlink installations coming in, it is truly touching just how many people support The Computer Workshop Group.

We would like to take this opportunity to say a huge THANK YOU to you ALL!

NEW BLOG | "STARLINK Q & A"

"We're excited with the potential Starlink is giving to our clients.

Let me tell you about Starlink?

This is a new to North QLD low-orbit Satellite service which is commenced coverage of the outback from July 2022.

Our licenced cabler and security advisor, Adrian has been involved with these in South QLD recently and the final result is actually amazing. Commonly speeds of 300mbps down and 50mbps up are the normal but the major difference is in the Latency.

The biggest issue with NBN Satellite other than restricting data limits is the distance to the Satellite itself. Roughly 41000km. Obviously it takes time to send out to the Satellite and back to the ground. This is why these sorts of connection experience ping/latency averaging 800ms.

With Starlink, the Satellite is only 550km from Earth on average so the signal moves much quicker and commonly the latency is well under 100ms.

What does this mean in the real world? Given Starlink connections are unlimited data, it means a lot. No more measuring data and worrying about going over your 300G a month. You can go crazy on a fast connection just like being in the city.

Starlink is new to North QLD so Clermont and Hughenden have been be some of the first full installations we have completed. This is why Adrian got involved in some installs in South QLD so we have the experience to work with once it is available in our service areas.

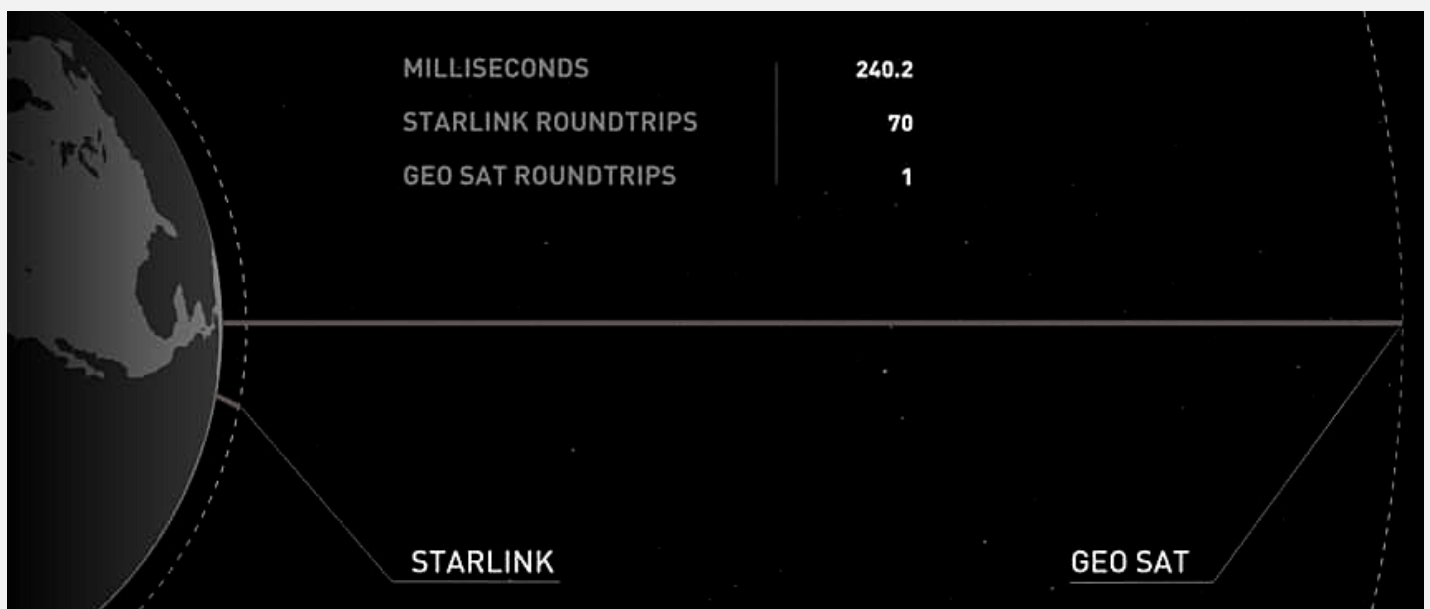

Solutions for you?..."

Client Liaison Officer

Starlink • BECUASE STARLINK SATELLITES ARE IN A LOW ORBIT, LATENCY IS SIGNIFICANTLY LOWER AROUND 20 MS V IN COMPARISON • 600+ MS

Data | RECOVERY

Whether you need to recover those important business files / client information or you have inadvertently deleted those valuable records / family photographs, our professional technicians are highly experienced in recovering data from all manner of devices.

Visit us today at The Computer Workshop Group and speak with one of our friendly team members.

BEFORE & AFTER

Our expert cabling are able to transform your office space ensuring cables are running safely and efficiently.

DOES YOUR DATA CABINET LOOK LIKE THIS?

"Running a small rural business (Giru Barramundi and Crayfish), is full-on.

There's heaps of challenges and a good coverage of knowledge and experience required. So it's reassuring that you don't also have to be an expert in computer repairs and maintenance.

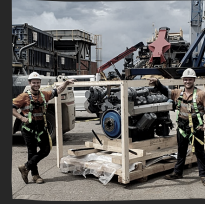

The staff at The Computer Workshop not only designed and built our system, when it comes time for repairs and upgrades, they can be relied upon to get it done. One less worry!"
